Prospectus

July 1, 2020

IMPORTANT NOTE: Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Fund's shareholder reports will no longer be sent by mail unless you specifically request paper copies of the reports from the Fund or from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change, and you need not take any action. You may elect to receive shareholder reports and other communications from the Fund or your financial intermediary electronically by calling or sending an email request.

You may elect to receive all future reports in paper free of charge. You can inform the Fund or your financial intermediary that you wish to continue receiving paper copies of your shareholder reports by calling or sending an email request. Your election to receive reports in paper will apply to all funds held with the fund complex/your financial intermediary. As with all mutual funds, the Securities and Exchange Commission has not approved or disapproved of these securities, nor has the Commission determined that this Prospectus is complete or accurate. Any representation to the contrary is a criminal offense.

Summary Section – Conquer Risk Managed Volatility Fund

Investment Objective

The Conquer Risk Managed Volatility Fund (the “Fund”) seeks total return.

Fees and Expenses of the Fund

The following table describes the expenses and fees that you may pay if you buy and hold shares of the Fund.

Shareholder Fees (fees paid directly from your investment)

Redemption Fees	None
-----------------	------

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	1.25%
Distribution 12b-1 Fees	0.00%
Other Expenses ^(a)	0.65%
Acquired Fund Fees and Expenses ^(a)	<u>0.10%</u>
Total Annual Fund Operating Expenses	<u>2.00%</u>

^(a)Based on estimated amounts for the current fiscal period.

Expense Example

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all your shares at the end of those periods. The example also assumes that your investment has a 5% annual return each year and that the Fund's operating expenses remain the same each year. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year	Three Years
\$203	\$627

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance.

The Principal Investment Strategy of the Fund

This Fund seeks total return by constructing a portfolio that is comprised, under normal market conditions, of exchange traded funds ("ETFs"), mutual funds (open-end investment companies) registered under the Investment Company Act of 1940 and/or cash and cash equivalents. The ETFs and mutual funds in which the Fund may invest are referred to as "underlying funds" throughout this Prospectus. The underlying funds generally invest in fixed income securities and equity securities. The underlying funds may invest in high-yield fixed income securities (also known as "junk bonds") and derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. The underlying funds may invest in both domestic and international securities, including securities from emerging markets. The Fund may use leverage and inverse strategies through investing in underlying funds that use leverage and inverse strategies. When an underlying fund uses leverage it is seeking to increase the potential return on its investment in a particular asset. These underlying funds may make investments in futures contracts, options and other derivative instruments that provide the economic effect of financial leverage by creating additional investment exposure to the underlying asset. An underlying fund that follows an inverse strategy is investing so that it performs opposite of its underlying index. The Fund expects to rebalance its investments in underlying funds that use leverage and/or inverse strategies on an ongoing basis as market movements dictate and there is no limitation on the amount of the Fund's assets that may be invested in these types of underlying funds.

Potomac Fund Management, Inc., the investment advisor to the Fund (the "Advisor"), utilizes technical analysis based quantitative systems to guide its decision-making process for the Fund. The systems utilized by the Fund attempt to assess the level of market risk that exist at any particular time, which, in turn, guides the Advisor's determinations as to whether the Fund should be fully invested in the market or hold more significant cash positions.

The Advisor's investment process seeks to identify trends to determine the strength or weakness in the current market environment. This part of the Advisor's process analyzes over 100 technical trading indicators built through a multitude of programming platforms. Each indicator is rigorously tested on an individual basis to determine the combinations that provide what the Advisor perceives to be the best indication of market direction. The technical trading indicators are then combined into sophisticated algorithmic composites that guide the Advisor's decision-making process. The raw data used in our systems include, but are not limited to: S&P 500, Dow Jones Industrial Average, Russell 2000, S&P 400 Mid Cap, NASDAQ 100, Dow Transports, Dow Utilities, Dow Corporate Bonds, Index Advance Decline, Trading Volume and High/Lows, Prime Rate, Discount Rate, Treasury Bill Rate, Fed Funds Rate, Commodity Research Bureau, Commercial Longs and Shorts, NYSE Short Interest, AAll Bullish and Bearish Percentages. The raw data is analyzed using technical tools, such as *moving averages*, *Bollinger bands*, *relative strength*, *stochastics*, *oscillators*, *intermarket analysis*, *trend following* and *counter trend analysis*.

The Advisor actively allocates the Fund's assets across fixed income and alternative underlying funds that demonstrate low volatility and favorable risk adjusted returns. The Fund's investments in alternative underlying funds generally provide exposure to

assets that are not designed to closely track or correlate to the performance of the general equity and/or fixed-income markets. Risk-managed policies employ the use of cash or money market funds during adverse conditions; these positions could at times be 100%.

The Fund is a "non-diversified" portfolio, which means it can invest in fewer securities at any one time than a diversified portfolio and can invest more of its assets in securities of a single issuer than a diversified portfolio. The Fund may invest a significant percentage of its assets in a limited number of securities. Also, the Fund may invest in a limited number of sectors but has no intention to concentrate its investments in any particular industry. The Fund may also engage in short-term trading and have a portfolio turnover rate in excess of 100%.

The Principal Risks of Investing in the Fund

Risks of Exchange Traded Funds and Mutual Funds. To the extent that the Fund invests in ETFs and mutual funds, the Fund will indirectly bear its proportionate share of any expenses (such as operating expenses and advisory fees) that may be paid by the underlying funds. These expenses would be in addition to the advisory fee and other expenses that the Fund bears in connection with its own operations. Investment in an ETF carries security specific risk and the market risk. Also, if the area of the market representing the underlying index or benchmark does not perform as expected for any reason, the value of the investment in the ETF may decline. In addition, due to transactions via market prices rather than at net asset value, the performance of an ETF may not completely replicate the performance of the underlying index. In addition, the Fund will indirectly bear a proportionate share of expenses, including any management fees, paid by each ETF in which the Fund invests. Such expenses are in addition to the operating expenses of the Fund, which are borne directly by shareholders of the Fund.

Portfolio Turnover Risk. The Fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates significantly in excess of 100%. Increased portfolio turnover may cause the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance, and may produce increased taxable distributions.

Leveraged ETF Risks. The net asset value and market price of leveraged ETFs are usually more volatile than the value of the tracked index or of other ETFs that do not use leverage. Leveraged ETFs use investment techniques and financial instruments that may be considered aggressive, including the use of derivative transactions. Most leveraged ETFs are designed to achieve their stated objectives on a daily basis. Their performance over long periods of time can differ significantly from the performance of the underlying index during the same period of time. This effect can be magnified in volatile markets.

Inverse ETF Risks. Inverse ETFs seek investment results that are the opposite of the daily performance of an underlying index or basket of stocks. Investors will lose money when the Index rises — a result that is the opposite from traditional funds.

Risk of Non-Diversification. The Fund is a non-diversified portfolio, which means that it has the ability to take larger positions in a smaller number of securities than a

portfolio that is "diversified." Non-diversification increases the risk that the value of the Fund could go down because of the poor performance of a single investment. Because the Fund may invest a significant percentage of its assets in a single ETF, mutual fund and/or money market fund, and at times may hold only one such position along with a cash or cash equivalent position, there is a risk that events negatively affecting these fewer positions will have a greater negative impact on the Fund's performance.

Sector Risk. Sector risk is the possibility that all stocks within the same group of industries will decline in price due to sector-specific market or economic developments. The Fund may be overweight in certain sectors at various times.

Management Risks. The Advisor's implementation of the Fund's strategy may fail to produce the intended results. In circumstances where the Advisor establishes high-conviction positions, it is possible the results of the trend analysis will be incorrect and the high-conviction trade (i.e., the leveraged position) will not produce the desired results; in such circumstances, the losses that the Fund could experience could be greater than they would otherwise be had the Fund not taken the leveraged position. At times, the Advisor may determine to hold significant portions of the Fund's assets in cash and cash equivalents, and in such scenarios may detract from the Fund's ability to achieve its objective.

Quantitative/Trend Model Risk. The risk that investments selected using quantitative models to identify market trends may perform differently from the market as a whole or from their expected performance. There can be no assurance that use of a quantitative trend model will enable the Fund to achieve positive returns or outperform the market.

The Fund may invest in ETFs, mutual funds and securities that carry the risks described below:

Risks in General. Domestic economic growth and market conditions, interest rate levels, and political events are among the factors affecting the securities markets in which the Fund invests. There is risk that these and other factors may adversely affect the Fund's performance. You could lose money by investing in the Fund.

Risks of Fixed Income Securities. Fixed income securities fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than the market price of shorter-term securities.

High-Yield Securities ("Junk Bond") Risk. To the extent that the Fund invests in underlying funds that invest in high-yield securities and unrated securities of similar credit quality (commonly known as "junk bonds"), the Fund may be subject to greater levels of interest rate and credit risk than funds that do not invest in such securities. Junk bonds are considered predominantly speculative with respect to the issuer's continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the underlying funds' ability to sell these securities (liquidity risk). If the issuer of a security is in default with respect to interest or principal payments, an investor may lose its entire investment, which will affect the Fund's return.

Foreign Risk. The Fund may invest in underlying funds that hold foreign securities, including American Depositary Receipts (ADRs). ADRs are certificates evidencing ownership of shares of a foreign-based issuer held in trust by a bank or similar financial institution. They are alternatives to the direct purchase of the underlying securities in their national markets and currencies. ADRs are subject to risks similar to those associated with direct investment in foreign securities. Foreign investments can involve significant risks in addition to the risks inherent in U.S. investments. These risks include adverse political, social and economic developments, differing auditing and legal standards, war, expropriation and nationalization.

Emerging Markets Risk. Emerging market issuers may be subject to a greater risk of loss than investments in issuers located or operating in more developed markets. Emerging markets may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed markets. Emerging markets often have less uniformity in accounting and reporting requirements, less reliable securities valuations and greater risk associated with custody of securities than developed markets.

Risks of Equity Securities. The risks associated with investing in equity securities of companies include the financial and operational risks faced by individual companies, the risk that the stock markets, sectors and industries in which the Fund invests may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change.

Risks of Derivatives. Underlying funds in the Fund's portfolio may use derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. There is no guarantee such strategies will work. If the underlying fund is not successful in employing such instruments in managing its portfolio, the Fund's performance will be worse than if it did not invest in underlying funds employing such strategies. Successful use by an underlying fund of options on stock indices, index futures contracts (and options thereon) will be subject to its ability to correctly predict movements in the direction of the securities generally or of a particular market segment. In addition, underlying funds will pay commissions and other costs in connection with such investments, which may increase the Fund's expenses and reduce the return. In utilizing certain derivatives, an underlying fund's losses are potentially unlimited. Derivative instruments may also involve the risk that other parties to the derivative contract may fail to meet their obligations, which could cause losses.

Performance History

Past performance (before and after taxes) of the Fund is no guarantee of how it will perform in the future. Past performance provides some indication of the risks of investing in the Fund. There is no performance information for the Fund since the Fund has not completed one full calendar year of operation as of the date of this prospectus. Performance data current to the most recent month end may be obtained by calling 1-888-774-6679.

Summary Section – Conquer Risk Tactical Rotation Fund

Investment Objective

The Conquer Risk Tactical Rotation Fund (the “Fund”) seeks growth and income.

Fees and Expenses of the Fund

The following table describes the expenses and fees that you may pay if you buy and hold shares of the Fund.

Shareholder Fees (fees paid directly from your investment)

Redemption Fees	None
-----------------	------

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	1.25%
Distribution 12b-1 Fees	0.00%
Other Expenses ^(a)	0.65%
Acquired Fund Fees and Expenses ^(a)	<u>0.15%</u>
Total Annual Fund Operating Expenses	2.05%

^(a)Based on estimated amounts for the current fiscal period.

Expense Example

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all your shares at the end of those periods. The example also assumes that your investment has a 5% annual return each year and that the Fund's operating expenses remain the same each year. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year	Three Years
\$208	\$643

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance.

The Principal Investment Strategy of the Fund

This Fund seeks growth and income by constructing a portfolio that is comprised, under normal market conditions, of exchange traded funds ("ETFs"), mutual funds (open-end investment companies) registered under the Investment Company Act of 1940 and/or cash and cash equivalents. The ETFs and mutual funds in which the Fund may invest are referred to as "underlying funds" throughout this Prospectus. The underlying funds generally invest in equity securities and fixed income securities. The underlying funds may invest in both domestic and international securities, including securities from emerging markets. The underlying funds may invest in small and medium capitalization companies and derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. The Fund may use leverage and inverse strategies through investing in underlying funds that use leverage and inverse strategies. When an underlying fund uses leverage it is seeking to increase the potential return on its investment in a particular asset. These underlying funds may make investments in futures contracts, options and other derivative instruments that provide the economic effect of financial leverage by creating additional investment exposure to the underlying asset. An underlying fund that follows an inverse strategy is investing so that it performs opposite of its underlying index. The Fund expects to rebalance its investments in underlying funds that use leverage and/or inverse strategies on an ongoing basis as market movements dictate and there is no limitation on the amount of the Fund's assets that may be invested in these types of underlying funds.

The Advisor utilizes technical analysis based quantitative systems to guide its decision-making process for the Fund. The systems utilized by the Fund attempt to assess the level of market risk that exist at any particular time, which, in turn, guides the Advisor's determinations as to whether the Fund should be fully invested in the market or hold more significant cash positions.

The Advisor's investment process seeks to identify trends to determine the strength or weakness in the current market environment. This part of the Advisor's process analyzes over 100 technical trading indicators built through a multitude of programming platforms. Each indicator is rigorously tested on an individual basis to determine the combinations that provide what the Advisor perceives to be the best indication of market direction. The technical trading indicators are then combined into sophisticated algorithmic composites that guide the Advisor's decision-making process. The raw data used in our systems include, but are not limited to: S&P 500, Dow Jones Industrial Average, Russell 2000, S&P 400 Mid Cap, NASDAQ 100, Dow Transports, Dow Utilities Dow Corporate Bonds, Index Advance Decline, Trading Volume and High/Lows, Prime Rate, Discount Rate, Treasury Bill Rate, Fed Funds Rate, Commodity Research Bureau, Commercial Longs and Shorts, NYSE Short Interest, AAI Bullish and Bearish Percentages. The raw data is analyzed using technical tools, such as *moving averages*, *Bollinger bands*, *relative strength*, *stochastics*, *oscillators*, *intermarket analysis*, *trend following* and *counter trend analysis*.

The Advisor actively allocates the Fund's assets across equity and fixed income ETF's and mutual funds overweighting those investments that exhibit the best risk-to-reward ratio. If the Advisor's algorithmic composites point to a rising market, the Fund may have a higher proportion of equity ETFs and mutual funds. During a downward

trending markets, the Advisor will limit the Fund's investments to low volatility ETFs, mutual funds and cash in an overall effort to reduce downside exposure. Specialty investments, such as leveraged and inverse ETF's, may be used from time to time to hedge risk and provide for smoother returns. Risk-managed policies employ the use of cash or money market funds during adverse conditions; these positions could at times be 100%.

The Fund is a "non-diversified" portfolio, which means it can invest in fewer securities at any one time than a diversified portfolio and can invest more of its assets in securities of a single issuer than a diversified portfolio. The Fund may invest a significant percentage of its assets in a limited number of securities. Also, the Fund may invest in a limited number of sectors but has no intention to concentrate its investments in any particular industry. The Fund may also engage in short-term trading and have a portfolio turnover rate in excess of 100%.

The Principal Risks of Investing in the Fund

Risks of Exchange Traded Funds and Mutual Funds. To the extent that the Fund invests in ETFs and mutual funds, the Fund will indirectly bear its proportionate share of any expenses (such as operating expenses and advisory fees) that may be paid by the underlying funds. These expenses would be in addition to the advisory fee and other expenses that the Fund bears in connection with its own operations. Investment in an ETF carries security specific risk and the market risk. Also, if the area of the market representing the underlying index or benchmark does not perform as expected for any reason, the value of the investment in the ETF may decline. In addition, due to transactions via market prices rather than at net asset value, the performance of an ETF may not completely replicate the performance of the underlying index. In addition, the Fund will indirectly bear a proportionate share of expenses, including any management fees, paid by each ETF in which the Fund invests. Such expenses are in addition to the operating expenses of the Fund, which are borne directly by shareholders of the Fund.

Portfolio Turnover Risk. The Fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates significantly in excess of 100%. Increased portfolio turnover may cause the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance, and may produce increased taxable distributions.

Leveraged ETF Risks. The net asset value and market price of leveraged ETFs are usually more volatile than the value of the tracked index or of other ETFs that do not use leverage. Leveraged ETFs use investment techniques and financial instruments that may be considered aggressive, including the use of derivative transactions. Most leveraged ETFs are designed to achieve their stated objectives on a daily basis. Their performance over long periods of time can differ significantly from the performance of the underlying index during the same period of time. This effect can be magnified in volatile markets.

Inverse ETF Risks. Inverse ETFs seek investment results that are the opposite of the daily performance of an underlying index or basket of stocks. Investors will lose money when the Index rises — a result that is the opposite from traditional funds.

Risk of Non-Diversification. The Fund is a non-diversified portfolio, which means that it has the ability to take larger positions in a smaller number of securities than a portfolio that is "diversified." Non-diversification increases the risk that the value of the Fund could go down because of the poor performance of a single investment. Because the Fund may invest a significant percentage of its assets in a single ETF, mutual fund and/or money market fund, and at times may hold only one such position along with a cash or cash equivalent position, there is a risk that events negatively affecting these fewer positions will have a greater negative impact on the Fund's performance.

Sector Risk. Sector risk is the possibility that all stocks within the same group of industries will decline in price due to sector-specific market or economic developments. The Fund may be overweight in certain sectors at various times.

Management Risks. The Advisor's implementation of the Fund's strategy may fail to produce the intended results. In circumstances where the Advisor establishes high-conviction positions, it is possible the results of the trend analysis will be incorrect and the high-conviction trade (i.e., the leveraged position) will not produce the desired results; in such circumstances, the losses that the Fund could experience could be greater than they would otherwise be had the Fund not taken the leveraged position. At times, the Advisor may determine to hold significant portions of the Fund's assets in cash and cash equivalents, and in such scenarios may detract from the Fund's ability to achieve its objective.

Quantitative/Trend Model Risk. The risk that investments selected using quantitative models to identify market trends may perform differently from the market as a whole or from their expected performance. There can be no assurance that use of a quantitative trend model will enable the Fund to achieve positive returns or outperform the market.

The Fund may invest in ETFs, mutual funds and securities that carry the risks described below:

Risks in General. Domestic economic growth and market conditions, interest rate levels, and political events are among the factors affecting the securities markets in which the Fund invests. There is risk that these and other factors may adversely affect the Fund's performance. You could lose money by investing in the Fund.

Risks of Equity Securities. The risks associated with investing in equity securities of companies include the financial and operational risks faced by individual companies, the risk that the stock markets, sectors and industries in which the Fund invests may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change.

Risks of Small and Medium Capitalization Companies. The underlying funds invest in the stocks of small and medium capitalization companies, which may subject the Fund to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Small and medium capitalization companies may have limited product lines and markets and may experience higher failure rates than do larger companies.

Risks of Fixed Income Securities. Fixed income securities fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed

income securities. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than the market price of shorter-term securities.

High-Yield Securities (“Junk Bond”) Risk. To the extent that the Fund invests in underlying funds that invest in high-yield securities and unrated securities of similar credit quality (commonly known as “junk bonds”), the Fund may be subject to greater levels of interest rate and credit risk than funds that do not invest in such securities. Junk bonds are considered predominantly speculative with respect to the issuer’s continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the underlying funds’ ability to sell these securities (liquidity risk). If the issuer of a security is in default with respect to interest or principal payments, an investor may lose its entire investment, which will affect the Fund’s return.

Foreign Risk. The Fund may invest in underlying funds that hold foreign securities, including American Depositary Receipts (ADRs). ADRs are certificates evidencing ownership of shares of a foreign-based issuer held in trust by a bank or similar financial institution. They are alternatives to the direct purchase of the underlying securities in their national markets and currencies. ADRs are subject to risks similar to those associated with direct investment in foreign securities. Foreign investments can involve significant risks in addition to the risks inherent in U.S. investments. These risks include adverse political, social and economic developments, differing auditing and legal standards, war, expropriation and nationalization.

Emerging Markets Risk. Emerging market issuers may be subject to a greater risk of loss than investments in issuers located or operating in more developed markets. Emerging markets may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed markets. Emerging markets often have less uniformity in accounting and reporting requirements, less reliable securities valuations and greater risk associated with custody of securities than developed markets.

Risks of Derivatives. Underlying funds in the Fund’s portfolio may use derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. There is no guarantee such strategies will work. If the underlying fund is not successful in employing such instruments in managing its portfolio, the Fund’s performance will be worse than if it did not invest in underlying funds employing such strategies. Successful use by an underlying fund of options on stock indices, index futures contracts (and options thereon) will be subject to its ability to correctly predict movements in the direction of the securities generally or of a particular market segment. In addition, underlying funds will pay commissions and other costs in connection with such investments, which may increase the Fund’s expenses and reduce the return. In utilizing certain derivatives, an underlying fund’s losses are potentially unlimited. Derivative instruments may also involve the risk that other parties to the derivative contract may fail to meet their obligations, which could cause losses.

Performance History

Past performance (before and after taxes) of the Fund is no guarantee of how it will perform in the future. Past performance provides some indication of the risks of investing in the Fund. There is no performance information for the Fund since the Fund has not completed one full calendar year of operation as of the date of this prospectus. Performance data current to the most recent month end may be obtained by calling 1-888-774-6679.

Summary Section – Conquer Risk Tactical Opportunities Fund

Investment Objective

The Conquer Risk Tactical Opportunities Fund (the "Fund") seeks long-term capital appreciation.

Fees and Expenses of the Fund

The following table describes the expenses and fees that you may pay if you buy and hold shares of the Fund.

Shareholder Fees (fees paid directly from your investment)

Redemption Fees	None
-----------------	------

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	1.25%
Distribution 12b-1 Fees	0.00%
Other Expenses ^(a)	0.65%
Acquired Fund Fees and Expenses ^(a)	<u>0.17%</u>
Total Annual Fund Operating Expenses	2.07%

^(a)Based on estimated amounts for the current fiscal period.

Expense Example

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all your shares at the end of those periods. The example also assumes that your investment has a 5% annual return each year and that the Fund's operating expenses remain the same each year. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year	Three Years
\$210	\$649

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance.

The Principal Investment Strategy of the Fund

This Fund seeks long-term capital appreciation by constructing a portfolio that is comprised, under normal market conditions, of exchange traded funds ("ETFs"), mutual funds (open-end investment companies) registered under the Investment Company Act of 1940 and/or cash and cash equivalents. The ETFs and mutual funds in which the Fund may invest are referred to as "underlying funds" throughout this Prospectus. The underlying funds generally invest in equity securities. The underlying funds may invest in both domestic and international securities, including securities from emerging markets. The underlying funds may invest in small and medium capitalization companies and derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. The Fund may use leverage and inverse strategies through investing in underlying funds that use leverage and inverse strategies. When an underlying fund uses leverage it is seeking to increase the potential return on its investment in a particular asset. These underlying funds may make investments in futures contracts, options and other derivative instruments that provide the economic effect of financial leverage by creating additional investment exposure to the underlying asset. An underlying fund that follows an inverse strategy is investing so that it performs opposite of its underlying index. The Fund expects to rebalance its investments in underlying funds that use leverage and/or inverse strategies on an ongoing basis as market movements dictate and there is no limitation on the amount of the Fund's assets that may be invested in these types of underlying funds.

Potomac Fund Management, Inc., the investment advisor to the Fund (the "Advisor"), utilizes technical analysis based quantitative systems to guide its decision-making process for the Fund. The systems utilized by the Fund attempt to assess the level of market risk that exist at any particular time, which, in turn, guides the Advisor's determinations as to whether the Fund should be fully invested in the market or hold more significant cash positions.

The Advisor's investment process seeks to identify trends to determine the strength or weakness in the current market environment. This part of the Advisor's process analyzes over 100 technical trading indicators built through a multitude of programming platforms. Each indicator is rigorously tested on an individual basis to determine the combinations that provide what the Advisor perceives to be the best indication of market direction. The technical trading indicators are then combined into sophisticated algorithmic composites that guide the Advisor's decision-making process. The raw data used in our systems include, but are not limited to: S&P 500, Dow Jones Industrial Average, Russell 2000, S&P 400 Mid Cap, NASDAQ 100, Dow Transports, Dow Utilities Dow Corporate Bonds, Index Advance Decline, Trading Volume and High/Lows, Prime Rate, Discount Rate, Treasury Bill Rate, Fed Funds Rate, Commodity Research Bureau, Commercial Longs and Shorts, NYSE Short Interest, AAll Bullish and Bearish Percentages. The raw data is analyzed using technical tools, such as *moving averages*, *Bollinger bands*, *relative strength*, *stochastics*, *oscillators*, *intermarket analysis*, *trend following* and *counter trend analysis*.

The Advisor actively allocates the Fund's assets across equity ETF's and mutual funds that hold a broad-based basket of equity securities. If the Advisor's algorithmic composites point to a rising market, the Fund may have a higher proportion of

aggressive equity ETFs and mutual funds. During a downward trending markets, the Advisor will limit the Fund's investments to low volatility ETFs, mutual funds and cash in an overall effort to reduce downside exposure. Specialty investments, such as leveraged and inverse ETF's, may be used from time to time to hedge risk and provide for smoother returns. Risk-managed policies employ the use of cash or money market funds during adverse conditions; these positions could at times be 100%.

The Fund is a "non-diversified" portfolio, which means it can invest in fewer securities at any one time than a diversified portfolio and can invest more of its assets in securities of a single issuer than a diversified portfolio. The Fund may invest a significant percentage of its assets in a limited number of securities. Also, the Fund may invest in a limited number of sectors but has no intention to concentrate its investments in any particular industry. The Fund may also engage in short-term trading and have a portfolio turnover rate in excess of 100%.

The Principal Risks of Investing in the Fund

Risks of Exchange Traded Funds and Mutual Funds. To the extent that the Fund invests in ETFs and mutual funds, the Fund will indirectly bear its proportionate share of any expenses (such as operating expenses and advisory fees) that may be paid by the underlying funds. These expenses would be in addition to the advisory fee and other expenses that the Fund bears in connection with its own operations. Investment in an ETF carries security specific risk and the market risk. Also, if the area of the market representing the underlying index or benchmark does not perform as expected for any reason, the value of the investment in the ETF may decline. In addition, due to transactions via market prices rather than at net asset value, the performance of an ETF may not completely replicate the performance of the underlying index. In addition, the Fund will indirectly bear a proportionate share of expenses, including any management fees, paid by each ETF in which the Fund invests. Such expenses are in addition to the operating expenses of the Fund, which are borne directly by shareholders of the Fund.

Portfolio Turnover Risk. The Fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates significantly in excess of 100%. Increased portfolio turnover may cause the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance, and may produce increased taxable distributions.

Leveraged ETF Risks. The net asset value and market price of leveraged ETFs are usually more volatile than the value of the tracked index or of other ETFs that do not use leverage. Leveraged ETFs use investment techniques and financial instruments that may be considered aggressive, including the use of derivative transactions. Most leveraged ETFs are designed to achieve their stated objectives on a daily basis. Their performance over long periods of time can differ significantly from the performance of the underlying index during the same period of time. This effect can be magnified in volatile markets.

Inverse ETF Risks. Inverse ETFs seek investment results that are the opposite of the daily performance of an underlying index or basket of stocks. Investors will lose money when the Index rises — a result that is the opposite from traditional funds.

Risk of Non-Diversification. The Fund is a non-diversified portfolio, which means that it has the ability to take larger positions in a smaller number of securities than a portfolio that is "diversified." Non-diversification increases the risk that the value of the Fund could go down because of the poor performance of a single investment. Because the Fund may invest a significant percentage of its assets in a single ETF, mutual fund and/or money market fund, and at times may hold only one such position along with a cash or cash equivalent position, there is a risk that events negatively affecting these fewer positions will have a greater negative impact on the Fund's performance.

Sector Risk. Sector risk is the possibility that all stocks within the same group of industries will decline in price due to sector-specific market or economic developments. The Fund may be overweight in certain sectors at various times.

Management Risks. The Advisor's implementation of the Fund's strategy may fail to produce the intended results. In circumstances where the Advisor establishes high-conviction positions, it is possible the results of the trend analysis will be incorrect and the high-conviction trade (i.e., the leveraged position) will not produce the desired results; in such circumstances, the losses that the Fund could experience could be greater than they would otherwise be had the Fund not taken the leveraged position. At times, the Advisor may determine to hold significant portions of the Fund's assets in cash and cash equivalents, and in such scenarios may detract from the Fund's ability to achieve its objective.

Quantitative/Trend Model Risk. The risk that investments selected using quantitative models to identify market trends may perform differently from the market as a whole or from their expected performance. There can be no assurance that use of a quantitative trend model will enable the Fund to achieve positive returns or outperform the market.

The Fund may invest in ETFs, mutual funds and securities that carry the risks described below:

Risks in General. Domestic economic growth and market conditions, interest rate levels, and political events are among the factors affecting the securities markets in which the Fund invests. There is risk that these and other factors may adversely affect the Fund's performance. You could lose money by investing in the Fund.

Risks of Equity Securities. The risks associated with investing in equity securities of companies include the financial and operational risks faced by individual companies, the risk that the stock markets, sectors and industries in which the Fund invests may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change.

Risks of Small and Medium Capitalization Companies. The underlying funds invest in the stocks of small and medium capitalization companies, which may subject the Fund to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Small and medium capitalization companies may have limited product lines and markets and may experience higher failure rates than do larger companies.

Risks of Fixed Income Securities. Fixed income securities fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than the market price of shorter-term securities.

High-Yield Securities (“Junk Bond”) Risk. To the extent that the Fund invests in underlying funds that invest in high-yield securities and unrated securities of similar credit quality (commonly known as “junk bonds”), the Fund may be subject to greater levels of interest rate and credit risk than funds that do not invest in such securities. Junk bonds are considered predominantly speculative with respect to the issuer’s continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the underlying funds’ ability to sell these securities (liquidity risk). If the issuer of a security is in default with respect to interest or principal payments, an investor may lose its entire investment, which will affect the Fund’s return.

Foreign Risk. The Fund may invest in underlying funds that hold foreign securities, including American Depositary Receipts (ADRs). ADRs are certificates evidencing ownership of shares of a foreign-based issuer held in trust by a bank or similar financial institution. They are alternatives to the direct purchase of the underlying securities in their national markets and currencies. ADRs are subject to risks similar to those associated with direct investment in foreign securities. Foreign investments can involve significant risks in addition to the risks inherent in U.S. investments. These risks include adverse political, social and economic developments, differing auditing and legal standards, war, expropriation and nationalization.

Emerging Markets Risk. Emerging market issuers may be subject to a greater risk of loss than investments in issuers located or operating in more developed markets. Emerging markets may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed markets. Emerging markets often have less uniformity in accounting and reporting requirements, less reliable securities valuations and greater risk associated with custody of securities than developed markets.

Risks of Derivatives. Underlying funds in the Fund’s portfolio may use derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. There is no guarantee such strategies will work. If the underlying fund is not successful in employing such instruments in managing its portfolio, the Fund’s performance will be worse than if it did not invest in underlying funds employing such strategies. Successful use by an underlying fund of options on stock indices, index futures contracts (and options thereon) will be subject to its ability to correctly predict movements in the direction of the securities generally or of a particular market segment. In addition, underlying funds will pay commissions and other costs in connection with such investments, which may increase the Fund’s expenses and reduce the return. In utilizing certain derivatives, an underlying fund’s losses are potentially unlimited. Derivative instruments may also involve the risk that other parties to the derivative contract may fail to meet their obligations, which could cause losses.

Performance History

Past performance (before and after taxes) of the Fund is no guarantee of how it will perform in the future. Past performance provides some indication of the risks of investing in the Fund. There is no performance information for the Fund since the Fund has not completed one full calendar year of operation as of the date of this prospectus. Performance data current to the most recent month end may be obtained by calling 1-888-774-6679.

Summary Section – Conquer Risk Defensive Bull Fund

Investment Objective

The Conquer Risk Defensive Bull Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

The following table describes the expenses and fees that you may pay if you buy and hold shares of the Fund.

Shareholder Fees (fees paid directly from your investment)

Redemption Fees	None
-----------------	------

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	1.25%
Distribution 12b-1 Fees	0.00%
Other Expenses ^(a)	0.50%
Acquired Fund Fees and Expenses ^(a)	<u>0.28%</u>
Total Annual Fund Operating Expenses	2.03%

^(a)Based on estimated amounts for the current fiscal period.

Expense Example

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all your shares at the end of those periods. The example also assumes that your investment has a 5% annual return each year and that the Fund's operating expenses remain the same each year. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year	Three Years
\$206	\$637

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance.

The Principal Investment Strategy of the Fund

This Fund seeks long-term capital appreciation by constructing a portfolio that is comprised, under normal market conditions, of exchange traded funds ("ETFs"), mutual funds (open-end investment companies) registered under the Investment Company Act of 1940 and/or cash and cash equivalents. The ETFs and mutual funds in which the Fund may invest are referred to as "underlying funds" throughout this Prospectus. The underlying funds generally invest in equity securities and derivatives. The underlying funds may invest in both domestic and international securities, including securities from emerging markets. The underlying funds may invest in small and medium capitalization companies and derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. The underlying funds may use leverage and inverse strategies. When an underlying fund uses leverage it is seeking to increase the potential return on its investment in a particular asset. These underlying funds may make investments in futures contracts, options and other derivative instruments that provide the economic effect of financial leverage by creating additional investment exposure to the underlying asset. An underlying fund that follows an inverse strategy is investing so that it performs opposite of its underlying index. The Fund expects to rebalance its investments in underlying funds that use leverage and/or inverse strategies on an ongoing basis as market movements dictate and there is no limitation on the amount of the Fund's assets that may be invested in these types of underlying funds.

Potomac Fund Management, Inc., the investment advisor to the Fund (the "Advisor"), utilizes technical analysis based quantitative systems to guide its decision-making process for the Fund. The systems utilized by the Fund attempt to assess the level of market risk that exist at any particular time, which, in turn, guides the Advisor's determinations as to whether the Fund should be fully invested in the market or hold more significant cash positions.

The Advisor's investment process seeks to identify trends to determine the strength or weakness in the current market environment. This part of the Advisor's process analyzes over 100 technical trading indicators built through a multitude of programming platforms. Each indicator is rigorously tested on an individual basis to determine the combinations that provide what the Advisor perceives to be the best indication of market direction. The technical trading indicators are then combined into sophisticated algorithmic composites that guide the Advisor's decision-making process. The raw data used in our systems include, but are not limited to: S&P 500, Dow Jones Industrial Average, Russell 2000, S&P 400 Mid Cap, NASDAQ 100, Dow Transports, Dow Utilities Dow Corporate Bonds, Index Advance Decline, Trading Volume and High/Lows, Prime Rate, Discount Rate, Treasury Bill Rate, Fed Funds Rate, Commodity Research Bureau, Commercial Longs and Shorts, NYSE Short Interest, AAI Bullish and Bearish Percentages. The raw data is analyzed using technical tools, such as *moving averages, Bollinger bands, relative strength, stochastics, oscillators, intermarket analysis, trend following and counter trend analysis.*

The Fund will generally use funds that hold a broad-based basket of equity securities. If the Advisor's algorithmic composites point to a rising market, the Fund will invest in ETFs that provide leveraged exposure of a particular market index, such as the S&P@ 500 Index. During downward trending markets, the Advisor will attempt to reduce

downside exposure by limiting the Fund's investments to cash. If the trend is, in the Advisor's view, weak enough the Fund's assets may be invested in ETFs that provide inverse exposure of a particular market index, such as the S&P® 500 Index.

The Fund is a "non-diversified" portfolio, which means it can invest in fewer securities at any one time than a diversified portfolio and can invest more of its assets in securities of a single issuer than a diversified portfolio. The Fund may invest a significant percentage of its assets in a limited number of securities. Also, the Fund may invest in a limited number of sectors but has no intention to concentrate its investments in any particular industry. The Fund may also engage in short-term trading and have a portfolio turnover rate in excess of 100%.

The Principal Risks of Investing in the Fund

Risks of Exchange Traded Funds and Mutual Funds. To the extent that the Fund invests in ETFs and mutual funds, the Fund will indirectly bear its proportionate share of any expenses (such as operating expenses and advisory fees) that may be paid by the underlying funds. These expenses would be in addition to the advisory fee and other expenses that the Fund bears in connection with its own operations. Investment in an ETF carries security specific risk and the market risk. Also, if the area of the market representing the underlying index or benchmark does not perform as expected for any reason, the value of the investment in the ETF may decline. In addition, due to transactions via market prices rather than at net asset value, the performance of an ETF may not completely replicate the performance of the underlying index. In addition, the Fund will indirectly bear a proportionate share of expenses, including any management fees, paid by each ETF in which the Fund invests. Such expenses are in addition to the operating expenses of the Fund, which are borne directly by shareholders of the Fund.

Portfolio Turnover Risk. The Fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates significantly in excess of 100%. Increased portfolio turnover may cause the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance, and may produce increased taxable distributions.

Leveraged ETF Risks. The net asset value and market price of leveraged ETFs are usually more volatile than the value of the tracked index or of other ETFs that do not use leverage. Leveraged ETFs use investment techniques and financial instruments that may be considered aggressive, including the use of derivative transactions. Most leveraged ETFs are designed to achieve their stated objectives on a daily basis. Their performance over long periods of time can differ significantly from the performance of the underlying index during the same period of time. This effect can be magnified in volatile markets.

Inverse ETF Risks. Inverse ETFs seek investment results that are the opposite of the daily performance of an underlying index or basket of stocks. Investors will lose money when the Index rises — a result that is the opposite from traditional funds.

Risk of Non-Diversification. The Fund is a non-diversified portfolio, which means that it has the ability to take larger positions in a smaller number of securities than a portfolio that is "diversified." Non-diversification increases the risk that the value of the

Fund could go down because of the poor performance of a single investment. Because the Fund may invest a significant percentage of its assets in a single ETF, mutual fund and/or money market fund, and at times may hold only one such position along with a cash or cash equivalent position, there is a risk that events negatively affecting these fewer positions will have a greater negative impact on the Fund's performance.

Sector Risk. Sector risk is the possibility that all stocks within the same group of industries will decline in price due to sector-specific market or economic developments. The Fund may be overweight in certain sectors at various times.

Management Risks. The Advisor's implementation of the Fund's strategy may fail to produce the intended results. In circumstances where the Advisor establishes high-conviction positions, it is possible the results of the trend analysis will be incorrect and the high-conviction trade (i.e., the leveraged position) will not produce the desired results; in such circumstances, the losses that the Fund could experience could be greater than they would otherwise be had the Fund not taken the leveraged position. At times, the Advisor may determine to hold significant portions of the Fund's assets in cash and cash equivalents, and in such scenarios may detract from the Fund's ability to achieve its objective.

Quantitative/Trend Model Risk. The risk that investments selected using quantitative models to identify market trends may perform differently from the market as a whole or from their expected performance. There can be no assurance that use of a quantitative trend model will enable the Fund to achieve positive returns or outperform the market.

The Fund may invest in ETFs, mutual funds and securities that carry the risks described below:

Risks in General. Domestic economic growth and market conditions, interest rate levels, and political events are among the factors affecting the securities markets in which the Fund invests. There is risk that these and other factors may adversely affect the Fund's performance. You could lose money by investing in the Fund.

Risks of Equity Securities. The risks associated with investing in equity securities of companies include the financial and operational risks faced by individual companies, the risk that the stock markets, sectors and industries in which the Fund invests may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change.

Risks of Derivatives. Underlying funds in the Fund's portfolio may use derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. There is no guarantee such strategies will work. If the underlying fund is not successful in employing such instruments in managing its portfolio, the Fund's performance will be worse than if it did not invest in underlying funds employing such strategies. Successful use by an underlying fund of options on stock indices, index futures contracts (and options thereon) will be subject to its ability to correctly predict movements in the direction of the securities generally or of a particular market segment. In addition, underlying funds will pay commissions and other costs in connection with such investments, which may increase the Fund's expenses and reduce the return. In utilizing certain derivatives, an underlying fund's losses are potentially unlimited. Derivative instruments may also involve the risk that

other parties to the derivative contract may fail to meet their obligations, which could cause losses.

Risks of Small and Medium Capitalization Companies. The underlying funds invest in the stocks of small and medium capitalization companies, which may subject the Fund to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Small and medium capitalization companies may have limited product lines and markets and may experience higher failure rates than do larger companies.

Risks of Fixed Income Securities. Fixed income securities fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than the market price of shorter-term securities.

High-Yield Securities (“Junk Bond”) Risk. To the extent that the Fund invests in underlying funds that invest in high-yield securities and unrated securities of similar credit quality (commonly known as “junk bonds”), the Fund may be subject to greater levels of interest rate and credit risk than funds that do not invest in such securities. Junk bonds are considered predominantly speculative with respect to the issuer’s continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the underlying funds’ ability to sell these securities (liquidity risk). If the issuer of a security is in default with respect to interest or principal payments, an investor may lose its entire investment, which will affect the Fund’s return.

Foreign Risk. The Fund may invest in underlying funds that hold foreign securities, including American Depositary Receipts (ADRs). ADRs are certificates evidencing ownership of shares of a foreign-based issuer held in trust by a bank or similar financial institution. They are alternatives to the direct purchase of the underlying securities in their national markets and currencies. ADRs are subject to risks similar to those associated with direct investment in foreign securities. Foreign investments can involve significant risks in addition to the risks inherent in U.S. investments. These risks include adverse political, social and economic developments, differing auditing and legal standards, war, expropriation and nationalization.

Emerging Markets Risk. Emerging market issuers may be subject to a greater risk of loss than investments in issuers located or operating in more developed markets. Emerging markets may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed markets. Emerging markets often have less uniformity in accounting and reporting requirements, less reliable securities valuations and greater risk associated with custody of securities than developed markets.

Performance History

Past performance (before and after taxes) of the Fund is no guarantee of how it will perform in the future. Past performance provides some indication of the risks of investing in the Fund. There is no performance information for the Fund since the Fund has not completed one full calendar year of operation as of the date of this prospectus. Performance data current to the most recent month end may be obtained by calling 1-888-774-6679.

Management

Investment Advisor

Potomac Fund Management, Inc.

Portfolio Manager

Manish Khatta has managed the Fund since its inception in July 2020. Mr. Khatta is the President and Chief Investment Officer of the Advisor.

For important information about purchase and sale of fund shares, tax information and financial intermediary compensation, please turn to the sections of this prospectus entitled “Purchase and Sale of Fund Shares,” “Tax Information,” and “Payments to Broker-Dealers and Other Financial Intermediaries”.

General Summary Information

Purchase and Sale of Fund Shares

The minimum initial and subsequent investment amounts for various types of accounts offered by the Funds are shown below.

	<u>Initial</u>	<u>Additional</u>
Regular Account	\$5,000	\$100
Automatic Investment Plan	\$1,000	\$100*
IRA Account	\$1,000	\$100

*An Automatic Investment Plan requires a \$100 minimum automatic monthly investment.

Investors may purchase or redeem Fund shares on any business day through a financial intermediary, by mail (Conquer Risk Funds, c/o Mutual Shareholder Services, 8000 Town Centre Drive, Suite 400, Broadview Heights, Ohio 44147), by wire, or by telephone at 1-888-774-6679. Purchases and redemptions by telephone are only permitted if you previously established this option on your account.

Tax Information

Each Fund's distributions are taxable and will be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account where distributions may be taxed when withdrawn from the tax deferred account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Funds through a broker-dealer or other financial intermediary (such as a bank), the Funds and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Funds over another investment. Ask your salesperson or visit your financial intermediary's web site for more information.

Investment Objective, Principal Investment Strategies, Related Risks, and Disclosure of Portfolio Holdings

Investment Objective

- The Conquer Risk Managed Volatility Fund seeks total return.
- The Conquer Risk Tactical Rotation Fund seeks growth and income.
- The Conquer Risk Tactical Opportunities Fund seeks long-term capital appreciation.
- The Conquer Risk Defensive Bull Fund seeks long-term capital appreciation.

Each Fund's investment objective is not fundamental, and it may be changed without shareholder approval, although a Fund will provide 60 days' advance notice of any such change. The Funds are classified as "non-diversified" portfolios, which means they can invest in fewer securities at any one time than a diversified portfolio and can invest more of their assets in securities of a single issuer than a diversified portfolio. The Funds may also engage in short-term trading and have a portfolio turnover rate in excess of 100%.

The Investment Selection Process Used by the Funds

Under normal market conditions, the Funds invests in exchange traded funds ("ETFs"), mutual funds, and/or cash and cash equivalents. The underlying ETFs and mutual funds generally invest in equity securities, fixed income securities and derivatives.

Defensive Positions

The Funds may hold all or a portion of its assets in cash or cash-equivalents like money market funds, certificates of deposit, short-term debt obligations, and repurchase agreements, either due to pending investments, when investment opportunities are limited or market conditions are adverse. Under these circumstances, the Funds may not participate in stock market advances or declines to the same extent it would, had it remained more fully invested in common stocks. If the Funds invests in shares of a money market fund, shareholders of the Fund generally will be subject to duplicative management and other fees and expenses. As a result of engaging in these temporary measures, the Funds may not achieve its investment objective.

The Principal Risks of Investing in the Funds

Risks of Exchange Traded Funds and Mutual Funds. To the extent a Fund invests in ETFs and mutual funds, the Fund will indirectly bear its proportionate share of any expenses (such as operating expenses and advisory fees) that may be paid by the underlying funds. These expenses would be in addition to the advisory fee and other expenses that the Fund bears in connection with its own operations. Investment in an

exchange traded fund (ETF) carries security specific risk and the market risk. Also, if the area of the market representing the underlying index or benchmark does not perform as expected for any reason, the value of the investment in the ETF may decline. In addition, due to transactions via market prices rather than at net asset value, the performance of an ETF may not completely replicate the performance of the underlying index. Each Fund will indirectly pay its proportionate share of any fees and expenses paid by the ETF in which it invests in addition to the fees and expenses paid directly by the Fund, many of which may be duplicative. Each Fund also will incur brokerage costs when it purchases ETFs. As a result, the cost of investing in the Funds generally will be higher than the cost of investing directly in ETFs. Additionally, ETFs are subject to the following risks: (i) the market price of an ETF's shares may be above or below its net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; (iii) the ETF may employ an investment strategy that utilizes high leverage ratios; (iv) trading of an ETF's shares may be halted if the listing exchange's officials deem such action appropriate; and (v) underlying ETF shares may be de-listed from the exchange or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) temporarily stop stock trading.

Portfolio Turnover Risk. Each Fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates significantly in excess of 100%. A portfolio turnover rate of 100% is equivalent to a fund buying and selling all the securities in its portfolio once during the course of a year. How long the Fund holds a security in its portfolio is generally not a factor in making buy and sell decisions. Increased portfolio turnover may cause the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance, and may produce increased taxable distributions. The distributions may be taxable as short-term capital gains which are taxed at ordinary income taxation rates rather than at the currently lower long-term capital gains taxation rates. It is likely that all or most of the distributions will be short-term capital gains.

Leveraged ETF Risks. The net asset value and market price of leveraged ETFs are usually more volatile than the value of the tracked index or of other ETFs that do not use leverage. Leveraged ETFs use investment techniques and financial instruments that may be considered aggressive, including the use of derivative transactions. Most leveraged ETFs are designed to achieve their stated objectives on a daily basis. Their performance over long periods of time can differ significantly from the performance of the underlying index during the same period of time. This effect can be magnified in volatile markets. The compounding effect has a significant impact on leveraged ETFs. As a result of compounding leveraged ETFs have a single day investment objective. A leveraged ETF's performance for periods greater than one day is likely to be either greater than or less than the index performance times the stated multiple in the ETF's objective. This effect becomes more pronounced for leveraged ETFs as market volatility increases. Investments by each Fund in leveraged ETFs may magnify changes in the Funds' share price and thus result in increased volatility of returns.

Inverse ETF Risks. Inverse ETFs seek investment results that are the opposite of the daily performance of an underlying index or basket of stocks. Investors will lose money when the Index rises — a result that is the opposite from traditional funds.

Risk of Non-Diversification. The Funds are non-diversified portfolio, which means that the Funds have the ability to take larger positions in a smaller number of securities than a portfolio that is "diversified." Non-diversification increases the risk that the value

of the Fund could go down because of the poor performance of a single investment. Because the Fund may invest a significant percentage of its assets in a single ETF, mutual fund and/or money market fund, and at times may hold only one such position along with a cash or cash equivalent position, there is a risk that events negatively affecting these fewer positions will have a greater negative impact on the Fund's performance.

Sector Risk. Sector risk is the possibility that stocks within the same group of industries will decline in price due to sector-specific market or economic developments. If the Advisor invests a significant portion of its assets in ETFs in a particular sector, the Funds are subject to the risk that companies in the same sector are likely to react similarly to legislative or regulatory changes, adverse market conditions and/or increased competition affecting that market segment. The sectors in which the Funds may be over-weighted will vary.

Management Risks. The Advisor's implementation of the Funds' strategy may fail to produce the intended results. In circumstances where the Advisor establishes high-conviction positions, it is possible the results of the trend analysis will be incorrect and the high-conviction trade (i.e., the leveraged position) will not produce the desired results; in such circumstances, the losses that the Funds could experience could be greater than they would otherwise be had the Funds not taken the leveraged position. At times, the Advisor may determine to hold significant portions of a Fund's assets in cash and cash equivalents, and in such scenarios may detract from the Fund's ability to achieve its objective.

Quantitative/Trend Model Risk. The risk that investments selected using quantitative models to identify market trends may perform differently from the market as a whole or from their expected performance. There can be no assurance that use of a quantitative trend model will enable the Funds to achieve positive returns or outperform the market.

Cybersecurity Risk. Cybersecurity and other operational and technology issues may result in financial losses to the Funds and their shareholders, impede business transactions, violate privacy and other laws, subject the Funds to certain regulatory penalties and reputational damage, and increase compliance costs and expenses. Although the Funds have developed processes and risk management systems designed to reduce these risks, the Funds do not directly control the cybersecurity defenses, operational and technology plans and systems of its service providers, financial intermediaries and companies in which they invest or with which they do business.

The Funds may invest in ETFs and securities that carry the risks described below:

Risks in General. Domestic and foreign economic growth and market conditions, interest rate levels, and political events are among the factors affecting the securities markets of the Funds' investments. There is risk that these and other factors may adversely affect the Funds' performance. You should consider your own investment goals, time horizon, and risk tolerance before investing in the Funds. An investment in the Funds may not be appropriate for all investors and is not intended to be a complete investment program. An investment in the Funds is not a deposit in the bank and is

not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. You may lose money by investing in the Funds.

Risks of Equity Securities. Overall stock market risks may affect the value of the Funds. These risks include the financial risk of selecting securities that do not perform as anticipated, the risk that the stock markets in which the Funds invests may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change. Many factors affect the performance of each company, including the strength of the company's management or the demand for its product or services. You should be aware that the value of a company's share price may decline as a result of poor decisions made by management or lower demand for the company's products or services. In addition, a company's share price may also decline if its earnings or revenues fall short of expectations. There are overall stock market risks that may also affect the value of the Funds. Over time, the stock markets tend to move in cycles, with periods when stock prices rise generally and periods when stock prices decline generally. The value of the Funds' investments may increase or decrease more than the stock markets in general. Common stocks, preferred securities, and warrants are examples of equity securities.

Risks of Fixed Income Securities. Fixed income securities fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than the market price of shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Funds, possibly causing the Funds' share price and total return to be reduced and fluctuate more than other types of investments. "Junk bonds" are speculative investments that carry greater risks and are more susceptible to real or perceived adverse economic and competitive industry conditions than higher quality debt securities. Government bonds, corporate bonds and high yield bonds are examples of fixed income securities.

High-Yield Securities ("Junk Bond") Risk. To the extent that the Funds invests in Underlying Funds that invest in high-yield securities and unrated securities of similar credit quality (commonly known as "junk bonds"), the Funds may be subject to greater levels of interest rate and credit risk than funds that do not invest in such securities. Junk bonds are considered predominantly speculative with respect to the issuer's continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the underlying funds' ability to sell these securities (liquidity risk). If the issuer of a security is in default with respect to interest or principal payments, an investor may lose its entire investment, which will affect the Funds' return.

Risks of Small and Medium Capitalization Companies. The underlying funds invest in the stocks of small and medium capitalization companies, which may subject the Fund to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Small and medium capitalization companies may have limited product lines and markets and may experience higher failure rates than do larger companies.

Foreign Risk. The Funds may invest in underlying funds that hold foreign securities, including American Depositary Receipts (ADRs). ADRs are certificates evidencing ownership of shares of a foreign-based issuer held in trust by a bank or similar financial institution. They are alternatives to the direct purchase of the underlying securities in their national markets and currencies. ADRs are subject to risks similar to those associated with direct investment in foreign securities. Foreign investments can involve significant risks in addition to the risks inherent in U.S. investments. These risks include adverse political, social and economic developments, differing auditing and legal standards, war, expropriation and nationalization.

Emerging Markets Risk. Emerging market issuers may be subject to a greater risk of loss than investments in issuers located or operating in more developed markets. Emerging markets may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed markets. Emerging markets often have less uniformity in accounting and reporting requirements, less reliable securities valuations and greater risk associated with custody of securities than developed markets.

Risks of Derivatives. Underlying funds in which the Funds may invest may use derivative instruments such as put and call options on stocks and stock indices, and index futures contracts and options thereon. There is no guarantee such strategies will work. If the underlying fund is not successful in employing such instruments in managing its portfolio, the Funds' performance will be worse than if it did not invest in underlying funds employing such strategies. Successful use by an underlying fund of options on stock indices, index futures contracts (and options thereon) will be subject to its ability to correctly predict movements in the direction of the securities generally or of a particular market segment. In addition, underlying funds will pay commissions and other costs in connection with such investments, which may increase the Funds' expenses and reduce the return. In utilizing certain derivatives, an underlying fund's losses are potentially unlimited. Derivative instruments may also involve the risk that other parties to the derivative contract may fail to meet their obligations, which could cause losses.

Market turbulence resulting from COVID-19. An outbreak of an infectious respiratory illness caused by a novel coronavirus known as COVID-19 has negatively affected the worldwide economy, as well as the economies of individual countries, the financial health of individual companies and the market in general in significant and unforeseen ways. The future impact of COVID-19 is currently unknown, and it may exacerbate other risks that apply to the Funds. Any such impact could adversely affect the Funds' performance, the performance of the securities in which a Fund invests and may lead to losses on your investment in a Fund.

Portfolio Holdings Disclosure

A description of the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio securities is available in the Funds' Statement of Additional Information ("SAI") and on the Funds' website at www.conquerrisk.fund.

Management

The Investment Advisor

Potomac Fund Management, Inc. ("Potomac") is the investment advisor of the Funds and has responsibility for the management of the Funds' affairs, under the supervision of the Trust's Board of Trustees. The Advisor is a registered investment advisor controlled by Manish Khatta. The Funds' investment portfolio is managed on a day to day basis by Manish Khatta. The Advisor provides investment advice to individuals, pensions, profit sharing plans, trusts, estates, other investment advisors, and to corporations and other business entities.

Mr. Khatta is the President and Chief Investment Officer of the Advisor. Mr. Khatta has managed the Funds since their inception. The Advisor's address is 777 Brickell Ave, Suite #500-9455, Miami, FL 33131.

Manish Khatta holds a BS degree in Finance from the University of Maryland. He has been a full-time employee with Potomac since January 2002 and in January 2013 he became President of the firm. Manish has spent his career creating and refining trading strategies built on mathematical computations and number crunching. Manish programmed the initial work behind Potomac's mechanical trading systems.

The Funds' SAI provides information about the portfolio manager's compensation, other accounts managed by the portfolio manager, and the portfolio manager's ownership of Fund shares.

The Advisor manages the investment portfolio of the Funds, subject to the policies adopted by the Trust's Board of Trustees. Under the Management Agreement, the Advisor, at its own expense and without reimbursement from the Trust, furnishes office space and all necessary office facilities, equipment, and executive personnel necessary for managing the assets of the Funds. For its services the Advisor receives an investment management fee equal to 1.25% of a Fund's average daily net assets up to \$100 million, 1.00% of a Fund's average daily net assets between \$100 million and \$200 million and 0.90% of a Fund's average daily net assets in excess of \$200 million. A discussion regarding the basis of the Board of Trustees' approval of the Management Agreement between the Trust and the Advisor will be available in the Funds' semi-annual report to shareholders for the period ending December 31, 2020.

Under the Services Agreement the Advisor receives an additional fee of 0.65% of a Fund's average daily net assets up to \$25 million, 0.35% of a Fund's average daily net assets from \$25 million to \$100 million, and 0.25% of such assets in excess of \$100 million and is obligated to pay the operating expenses of a Fund excluding management fees, brokerage fees and commissions, 12b-1 fees (if any), taxes, borrowing costs (such as (a) interest and (b) dividend expenses on securities sold short), ADR fees, the cost of acquired funds and extraordinary expenses. Additionally, under the Services Agreement the Advisor supervises the Funds' business affairs. The Advisor coordinates for the provision of the services of a Chief Compliance Officer for the Trust with respect to the Funds, executive and administrative services including, but are not limited to, the coordination of all third parties furnishing services to the Funds, review of the books and records of the Funds maintained by such third parties,

and such other actions with respect to the Funds as may be necessary in the opinion of the Advisor to perform its duties under the Services Agreement.

Shareholder Information

Pricing of Fund Shares

The price you pay for a share of each Fund, and the price you receive upon selling or redeeming a share of each Fund, is called the Fund's net asset value ("NAV"). The NAV is calculated by taking the total value of the Fund's assets, subtracting its liabilities, and then dividing by the total number of shares outstanding, rounded to the nearest cent:

$$\text{Net Asset Value} = \frac{\text{Total Assets} - \text{Liabilities}}{\text{Number of Shares Outstanding}}$$

The NAV is generally calculated as of the close of trading on the New York Stock Exchange (normally 4:00 p.m. Eastern time) every day the Exchange is open for trading. The New York Stock Exchange generally is open every day other than weekends and holidays. All purchases, redemptions or reinvestments of Fund shares will be priced at the next NAV calculated after your order is received in proper form by the Funds' Transfer Agent, Mutual Shareholder Services. If you purchase shares directly from the Fund, your order must be placed with the Transfer Agent prior to the close of the trading of the New York Stock Exchange in order to be confirmed for that day's NAV. The Funds' assets are generally valued at their market value. If market prices are not available or, in the Advisor's opinion, market prices do not reflect fair value, or if an event occurs after the close of trading (but prior to the time the NAV is calculated) that materially affects fair value, the Advisor may value the Funds' assets at their fair value according to policies approved by the Funds' Board of Trustees. For example, if trading in a portfolio security is halted and does not resume before the Funds calculate its NAV, the Advisor may need to price the security using the Funds' fair value pricing guidelines. Without a fair value price, short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of a Funds' portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing policies will prevent dilution of the Funds' NAV by short-term traders. The Funds' investments are valued at market value or, if a market quotation is not readily available, at the fair value determined in good faith by the Advisor, subject to the review and oversight of the Funds' Board of Trustees. The Funds may use pricing services to help determine market value. Because the Funds may have portfolio securities that are primarily listed on foreign exchanges that trade on weekends or other days when the Funds do not price its shares, the net asset value of the Funds' shares may change on days when shareholders will not be able to purchase or redeem the Funds' shares. With respect to any portion of a Funds' assets that are invested in one or more open-end management investment companies that are registered under the Investment Company Act, the Funds' net asset value is calculated based upon the net asset values of the registered open-end management investment companies in which the Funds invest. The prospectuses for these investment companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

Customer Identification Program

IMPORTANT INFORMATION ABOUT PROCEDURES FOR OPENING A NEW ACCOUNT

To help the government fight the funding of terrorism and money laundering activities, Federal law requires all financial institutions to obtain, verify, and record information that identifies each person who opens an account. This means that, when you open an account, we will ask for your name, address, date of birth, and other information that will allow us to identify you. We may also ask for identifying documents and may take additional steps to verify your identity. We may not be able to open an account or complete a transaction for you until we are able to verify your identity.

Investing in the Funds

You may purchase shares directly through the Funds' transfer agent or through a brokerage firm or other financial institution that has agreed to sell the Funds' shares. If you are investing directly in the Funds for the first time, you will need to establish an account by completing a Shareholder Account Application (To establish an IRA, complete an IRA Application). To request an application, call toll-free 1-888-774-6679. Your initial investment minimum can be found in the table below. The Funds reserve the right to change the amount of these minimums from time to time or to waive them in whole or in part for certain accounts. Investment minimums may be higher or lower to investors purchasing shares through a brokerage firm or other financial institution.

Minimum Investments

	<u>Initial</u>	<u>Additional</u>
Regular Account	\$5,000	\$100
Automatic Investment Plan	\$1,000	\$100*
IRA Account	\$1,000	\$100

*An Automatic Investment Plan requires a \$100 minimum automatic monthly or quarterly investment.

Investments Made Through Brokerage Firms or Other Financial Institutions

The Funds may be purchased through broker dealers and other intermediaries. If you invest through a brokerage firm or other financial institution, the policies and fees may be different than those described here. Financial advisers, financial supermarkets, brokerage firms, and other financial institutions may charge transaction and other fees and may set different minimum investments or limitations on buying or selling shares. Such brokers are authorized to designate other intermediaries to receive purchase and redemption orders on the Funds' behalf. Consult a representative of your financial institution if you have any questions. The Funds will be deemed to have received a purchase or redemption order when an authorized broker or, if applicable, a broker's authorized designee, received the order. Customer orders will be priced at the Funds' net asset value next computed after they are received by an authorized broker or the broker's authorized designee. Your financial institution is responsible for transmitting your order in a timely manner.

Payment

All purchases must be made in U.S. dollars and checks must be drawn on U.S. banks. No cash, money orders, traveler's checks, credit cards, credit card checks, third-party checks or other checks deemed to be high-risk checks will be accepted. A \$20 fee will be charged against your account for any payment check returned to the transfer agent or for any incomplete electronic fund transfer, or for insufficient funds, stop payment, closed account or other reasons. If a check does not clear your bank or the Funds are unable to debit your pre-designated bank account on the day of purchase, the Funds reserve the right to cancel the purchase. If your purchase is canceled, you will be responsible for any losses or fees imposed by your bank and losses that may be incurred as a result of a decline in the value of the canceled purchase. The Funds (or Fund agent) have the authority to redeem shares in your account(s) to cover any losses due to fluctuations in share price. Any profit on such cancellation will accrue to the Funds. Your investment in the Funds should be intended to serve as a long-term investment vehicle. The Funds are not designed to provide you with a means of speculating on the short-term fluctuations in the stock market. The Funds reserves the right to reject any purchase request that it regards as disruptive to the efficient management of the Funds, which includes investors with a history of excessive trading. The Funds also reserves the right to stop offering shares at any time.

Types of Account Ownership

You can establish the following types of accounts by completing a Shareholder Account Application:

- **Individual or Joint Ownership.** Individual accounts are owned by one person. Joint accounts have two or more owners.
- **A Gift or Transfer to Minor.** (UGMA or UTMA) A UGMA/UTMA account is a custodial account managed for the benefit of a minor. To open an UGMA or UTMA account, you must include the minor's social security number on the application.
- **Trust.** An established trust can open an account. The names of each trustee, the name of the trust and the date of the trust agreement must be included on the application.
- **Business Accounts.** Corporation and partnerships may also open an account. The application must be signed by an authorized officer of the corporation or a general partner of a partnership.
- **IRA Accounts.** See "Tax-Deferred Plans".

Instructions for Opening and Adding to an Account

TO OPEN AN ACCOUNT

By Mail

Complete and sign the Shareholder Application or an IRA Application.

Make your check payable to Conquer Risk Funds.

- For IRA accounts, please specify the year for which the contribution is made.

Mail or overnight the application and check to:

Conquer Risk Funds
c/o Mutual Shareholder Services
8000 Town Centre Drive, Suite 400
Broadview Heights, Ohio 44147

TO ADD TO AN ACCOUNT

By Mail

Complete the investment slip that is included with your account statement and write your account number on your check. If you no longer have your investment slip, please reference your name, account number, and address on your check.

Mail or overnight the slip and the check to:

Conquer Risk Funds
c/o Mutual Shareholder Services
8000 Town Centre Drive, Suite 400
Broadview Heights, Ohio 44147

TO OPEN AN ACCOUNT

By Wire

Call 1-888-774-6679 for instructions and to obtain an investor account number or an IRA account number prior to wiring to the Funds.

TO ADD TO AN ACCOUNT

By Wire

Call 1-888-774-6679 for instructions.

Telephone and Wire Transactions

With respect to all transactions made by telephone, the Funds and their transfer agent will employ reasonable procedures to confirm that instructions communicated by telephone are genuine. Such procedures may include, among others, requiring some form of personal identification prior to acting upon telephone instructions, providing written confirmation of all such transactions, and/or tape recording all telephone instructions. If reasonable procedures are followed, then neither the Funds nor the transfer agent will be liable for any loss, cost, or expense for acting upon an investor's telephone instructions or for any unauthorized telephone redemption. In any instance where the Funds' transfer agent is not reasonably satisfied that instructions received

by telephone are genuine, neither the Funds nor the transfer agent shall be liable for any losses which may occur because of delay in implementing a transaction.

If you purchase your initial shares by wire, the transfer agent first must have received a completed account application and issued an account number to you. The account number must be included in the wiring instructions as set forth above. The transfer agent must receive your account application to establish shareholder privileges and to verify your account information. Payment of redemption proceeds may be delayed, and taxes may be withheld unless the Funds receives a properly completed and executed account application.

Shares purchased by wire will be purchased at the NAV next determined after the transfer agent receives your wired funds and all required information is provided in the wire instructions. If the wire is not received by 4:00 p.m. Eastern time, the purchase will be effective at the NAV next calculated after receipt of the wire.

Tax-Deferred Plans

If you are eligible, you may set up one or more tax-deferred accounts. A tax-deferred account allows you to shelter your investment income and capital gains from current income taxes. A contribution to certain of these plans may also be tax deductible. Tax-deferred accounts include retirement plans described below. Distributions from these plans are generally subject to an additional tax if withdrawn prior to age 59 1/2 or used for a nonqualifying purpose. Investors should consult their tax adviser or legal counsel before selecting a tax-deferred account.

US Bank, N.A., serves as the custodian for the tax-deferred accounts offered by the Funds. You will be charged an annual account maintenance fee of \$8 for each tax-deferred account you have with the Funds. You may pay the fee by check or have it automatically deducted from your account (usually in December). The custodian reserves the right to change the amount of the fee or to waive it in whole or part for certain types of accounts.

Types of Tax-Deferred Accounts

- **Traditional IRA**
An individual retirement account. Your contribution may or may not be deductible depending on your circumstances. Assets can grow tax-deferred and distributions are taxable as income.
- **Roth IRA**
An IRA with non-deductible contributions, tax-free growth of assets, and tax-free distributions for qualified distributions.
- **Spousal IRA**
An IRA funded by a working spouse in the name of a non-earning spouse.
- **SEP-IRA**
An individual retirement account funded by employer contributions. Your assets grow tax-deferred and distributions are taxable as income.

- **Keogh or Profit Sharing Plans**

These plans allow corporations, partnerships and individuals who are self-employed to make tax deductible contributions for each person covered by the plans.

- **403(b) Plans**

An arrangement that allows employers of charitable or educational organizations to make voluntary salary reduction contributions to a tax-deferred account.

- **401(k) Plans**

Allows employees of corporations of all sizes to contribute a percentage of their wages on a tax deferred basis. These accounts need to be established by the trustee of the plan.

Automatic Investment Plans

By completing the Automatic Investment Plan section of the account application, you may make automatic monthly investments (\$100 minimum per purchase) in the Funds from your bank or savings account. Your initial investment minimum is \$1,000 if you select this option. Shares of the Funds may also be purchased through direct-deposit plans offered by certain employers and government agencies. These plans enable a shareholder to have all or a portion of his or her payroll or Social Security checks transferred automatically to purchase shares of the Fund.

FOR INVESTING

Automatic Investment Plan

For making automatic investments from a designated bank account.

Payroll Direct Deposit Plan

For making automatic investments from your payroll check.

Dividend Reinvestment

All income dividends and capital gains distributions will be automatically reinvested in shares of the Funds unless you indicate otherwise on the account application or in writing.

Instructions for Selling Fund Shares

You may sell all or part of your shares on any day that the New York Stock Exchange is open for trading. Your shares will be sold at the next NAV per share calculated after your order is received in proper form by the transfer agent. The proceeds of your sale may be more or less than the purchase price of your shares, depending on the market value of the Funds' securities at the time of your sale. Your order will be processed promptly and you will generally receive the proceeds within seven days after receiving your properly completed request. The Funds will not mail any proceeds unless your investment check has cleared the bank, which may take up to fifteen calendar days. This procedure is intended to protect the Funds and its shareholders from loss. If the dollar or share amount requested is greater than the current value of your account, your entire account balance will be redeemed. If you choose to redeem your account in full, any automatic services currently in effect for the account will be terminated unless you indicate otherwise in writing.

TO SELL SHARES

By Mail

Write a letter of instruction that includes:

- The names(s) and signature(s) of all account owners.
- Your account number.
- The dollar or share amount you want to sell.
- Where to send the proceeds.
- If redeeming from your IRA, please note applicable withholding requirements.
- Obtain a signature guarantee or other documentation, if required.

Mail or overnight your request to:

Conquer Risk Funds
c/o Mutual Shareholder Services
8000 Town Centre Drive, Suite 400
Broadview Heights, Ohio 44147

By Telephone

- You will automatically be granted telephone redemption privileges unless you decline them in writing or indicate on the appropriate section of the account application that you decline this option. Otherwise, you may redeem Fund shares by calling 1-888-774-6679. Redemption proceeds will only be mailed to your address of record.
- You may only redeem a maximum of \$25,000 per day by telephone.
- You will not be able to redeem by telephone and have a check sent to your address of record for a period of 15 days following an address change.
- Unless you decline telephone privileges in writing or on your account application, as long as the Funds take reasonable measures to verify the order, you may be responsible for any fraudulent telephone order.

For specific information on how to redeem your account, and to determine if a signature guarantee or other documentation is required, please call toll-free in the U.S. 1-888-774-6679.

Additional Redemption Information

The Funds typically expect to meet redemption requests through cash holdings or cash equivalents and expects to use cash holdings or cash equivalents on a regular basis. To the extent cash holdings or cash equivalents are not available to meet redemption requests the Funds will meet redemption requests by selling portfolio assets.

Signature Guarantees

Signature guarantees are designed to protect both you and the Funds from fraud. A signature guarantee of each owner is required to redeem shares in the following situations:

- If you change ownership on your account.
- If a change of address request has been received by the transfer agent within the last 15 days.
- If you wish to redeem \$25,000 or more from any shareholder account.

Signature guarantees can be obtained from most banks, savings and loan associations, trust companies, credit unions, broker-dealers, and member firms of a national securities exchange. Call your financial institution to see if they have the ability to guarantee a signature. **A notary public cannot provide signature guarantees.**

The Funds reserve the right to require a signature guarantee under other circumstances or to delay a redemption when permitted by Federal Law. For more information pertaining to signature guarantees, please call 1-888-774-6679.

Corporate, Trust and Other Accounts

Redemption requests from corporate, trust, and other accounts may require documents in addition to those described above, evidencing the authority of the officers, trustees or others. In order to avoid delays in processing redemption requests for these accounts, you should call the transfer agent at 1-888-774-6679 to determine what additional documents are required.

Address Changes

To change the address on your account, call the transfer agent at 1-888-774-6679 or send a written request signed by all account owners. Include the account number(s) and name(s) on the account and both the old and new addresses. Certain options may be suspended for a period of 15 days following an address change.

Transfer of Ownership

In order to change the account registration or transfer ownership of an account, additional documents will be required. In order to avoid delays in processing these requests, you should call the transfer agent at 1-888-774-6679 to determine what additional documents are required.

Redemption Initiated by the Fund

Because there are certain fixed costs involved with maintaining your account, the Funds may require you to redeem all of your shares if your account balance falls below \$500. After your account balance falls below the minimum balance, you will receive a notification from the Funds indicating its intent to close your account along with instructions on how to increase the value of your account to the minimum amount within 60 days. If your account balance is still below \$500 after 60 days, the Funds may close your account and send you the proceeds. This minimum balance requirement does not apply to accounts using automatic investment plans, to IRAs,

and to other tax-sheltered investment accounts. The right of redemption by the Fund will not apply if the value of your account balance falls below \$500 because of market performance. All shares of the Funds are also subject to involuntary redemption if the Board of Trustees determines to liquidate the Funds. Any involuntary redemption will create a capital gain or loss, which may have tax consequences about which you should consult your tax adviser.

Shareholder Communications

Account Statements

Every quarter, shareholders of the Funds will automatically receive regular account statements. You will also be sent a yearly statement detailing the tax characteristics of any dividends and distributions you have received.

Confirmations

Confirmation statements will be sent after each transaction that affects your account balance or account registration.

Regulatory Mailings

Financial reports will be sent at least semiannually. Annual reports will include audited financial statements. To reduce expenses, one copy of each report will be mailed to each taxpayer identification number even though the investor may have more than one account in the Funds.

Dividends and Distributions

The Funds intends to pay distributions on an annual basis and expects that distributions will consist primarily of capital gains. You may elect to reinvest income dividends and capital gain distributions in the form of additional shares of the Funds or receive these distributions in cash. Dividends and distributions from the Funds are automatically reinvested in the Funds, unless you elect to have dividends paid in cash. Reinvested dividends and distributions receive the same tax treatment as those paid in cash. If you are interested in changing your election, you may call the transfer agent at 1-888-774-6679 or send a written notification to:

Conquer Risk Funds
c/o Mutual Shareholder Services
8000 Town Centre Drive, Suite 400
Broadview Heights, Ohio 44147

Market Timing

The Funds discourage market timing. Market timing is an investment strategy using frequent purchases, redemptions and/or exchanges in an attempt to profit from short term market movements. Market timing may result in dilution of the value of Fund shares held by long term shareholders, disrupt portfolio management and increase Fund expenses for all shareholders. The Board of Trustees also has adopted a policy directing the Funds to reject any purchase order with respect to one investor, a related group of investors or their agent(s), where it detects a pattern of purchases and sales

of the Fund that indicates market timing or trading that it determines is abusive. This policy applies uniformly to all Fund shareholders. While the Funds attempts to deter market timing, there is no assurance that it will be able to identify and eliminate all market timers. For example, certain accounts called “omnibus accounts” include multiple shareholders. Omnibus accounts typically provide the Funds with a net purchase or redemption request on any given day where purchasers of Fund shares and redeemers of Fund shares are netted against one another and the identity of individual purchasers and redeemers whose orders are aggregated are not known by the Funds. The netting effect often makes it more difficult for the Funds to detect market timing, and there can be no assurance that the Funds will be able to do so. However, the Funds will establish information sharing agreements with intermediaries as required by Rule 22c-2 under the 1940 Act, and otherwise use reasonable efforts to work with intermediaries to identify excessive short-term trading in underlying accounts. The Funds may invest in foreign securities, and small- to mid-capitalization companies, and therefore may have additional risks associated with market timing. Because the Funds may invest in securities that are, among other things, priced on foreign exchanges, thinly traded, traded infrequently or relatively illiquid, the Funds have the risk that the current market price for the securities may not accurately reflect current market values. This can create opportunities for market timing by shareholders. For example, securities trading on overseas markets present time zone arbitrage opportunities when events effecting portfolio security values occur after the close of the overseas market, but prior to the close of the U.S. market. A shareholder may seek to engage in short-term trading to take advantage of these pricing differences, and therefore could dilute the value of Funds shares held by long term shareholders, disrupt portfolio management and increase Fund expenses for all shareholders.

Taxes

Fund dividends and distributions are taxable to most investors (unless your investment is in an IRA or other tax-advantaged account). Dividends paid by the Fund out of net ordinary income and distributions of net short-term capital gains are taxable to the shareholders as ordinary income.

Distributions by the Funds of net long-term capital gains to shareholders are generally taxable to the shareholders at the applicable long-term capital gains rate, regardless of how long the shareholder has held shares of the Funds.

Redemptions of shares of the Funds are taxable events which you will generally realize as a gain or loss. The amount of the gain or loss and the rate of tax will depend mainly upon the amount paid for the shares, the amount received from the sale, and how long the shares were held.

The Funds’ distributions may be subject to federal income tax whether received in cash or reinvested in additional shares. In addition to federal taxes, you may be subject to state and local taxes on distributions.

The Funds may be required to withhold U.S. federal income tax (presently at the rate of twenty-four percent (24%) on all taxable distributions payable to shareholders who fail to provide the Funds with their correct taxpayer identification numbers or to make required certifications, or who have been notified by the Internal Revenue Service that

they are subject to backup withholding. Backup withholding is not an additional tax; rather, it is a way in which the Internal Revenue Service ensures it will collect taxes otherwise due. Any amounts withheld may be credited against a shareholder's U.S. federal income tax liability.

Federal law requires that mutual fund companies report their shareholders' cost basis, gain/loss, and holding period to the Internal Revenue Service on the Funds' shareholders' Consolidated Form 1099s when "covered" securities are sold. Covered securities are any regulated investment company and/or dividend reinvestment plan shares acquired on or after January 1, 2012.

The Funds have chosen average cost as the standing (default) tax lot identification method for all shareholders. A tax lot identification method is the way the Funds will determine which specific shares are deemed to be sold when there are multiple purchases on different dates at differing net asset values, and the entire position is not sold at one time. The Funds' standing tax lot identification method is the method covered shares will be reported on your Consolidated Form 1099 if you do not select a specific tax lot identification method. You may choose a method different than the Funds' standing method and will be able to do so at the time of your purchase or upon the sale of covered shares. Please refer to the appropriate Internal Revenue Service regulations or consult your tax adviser regarding your personal circumstances.

The Funds are responsible for maintaining accurate cost basis and tax lot information for tax reporting purposes. The Funds and their service providers do not provide tax advice. You should consult independent sources, which may include a tax professional, with respect to any decisions you may make with respect to choosing a tax lot identification method.

The foregoing is not intended to be a full discussion of federal tax laws and the effect of such laws on you. Because everyone's tax situation is unique, always consult your tax professional about federal, state, and local tax consequences of an investment in the Funds.

Glossary of Terms

Moving Average - is the average closing price of a security over a defined period of time.

Bollinger Bands - are a type of price envelope developed by [John Bollinger](#). Price envelopes define upper and lower price range levels. Bollinger Bands are envelopes plotted at a standard deviation level above and below a simple moving average of the price. Because the distance of the bands is based on standard deviation, they adjust to volatility swings in the underlying price. Bollinger Bands use 2 parameters, Period and Standard Deviations, *StdDev*. The default values are 20 for period, and 2 for standard deviations, although you may customize the combinations. Bollinger bands help determine whether prices are high or low on a relative basis. They are used in pairs, both upper and lower bands and in conjunction with a moving average. Further, the pair of bands is not intended to be used on its own. Use the pair to confirm signals given with other indicators.

Relative Strength - is a ratio of a stock price performance to a market average (index) performance.

Stochastics – refers to a randomly determined process. A stochastic indicator is designed to display the location of the close (i.e. closing price of security) compared to the high/low range over a user defined number of periods.

Oscillators - is a [technical analysis](#) tool that constructs high- and low- bands between two extreme values, and then builds a trend indicator that fluctuates within these bounds. Traders use the trend indicator to discover short-term overbought or oversold conditions. When the value of the oscillator approaches the upper extreme value, technical analysts interpret that information to mean that the asset is overbought, and as it approaches the lower extreme, technicians consider the asset to be oversold.

Intermarket Analysis - involves looking at [asset classes](#) or financial markets that have strong correlations.

Trend Following Analysis - is a trading strategy according to which one should buy an asset when its price trend goes up, and sell when its trend goes down, expecting price movements to continue.

Counter Trend Following Analysis - is a type of [swing trading](#) strategy that assumes a current trading trend will reverse and attempts to profit from that reversal.

PRIVACY NOTICE

The following is a description of the Funds' policies regarding disclosure of non-public personal information that you provide to the Funds or that the Funds collect from other sources. In the event that you hold shares of the Funds through a broker-dealer or other financial intermediary, the privacy policy of your financial intermediary would govern how your nonpublic personal information would be shared with unaffiliated third parties.

Categories of Information the Funds Collect. The Funds collect the following nonpublic personal information about you:

- Information the Funds receive from you on or in applications or other forms, correspondence, or conversations (such as your name, address, phone number, Social Security Number, assets, income and date of birth); and

- Information about your transactions with the Funds, its affiliates, or others (such as your account number, balance, payment history, parties to transactions, cost-basis information, and other financial information).

Categories of Information the Funds Discloses. The Funds do not disclose any nonpublic personal information about its current or former shareholders to unaffiliated third parties, except as required or permitted by law. The Funds are permitted by law to disclose all of the information it collects, as described above, to its service providers (such as the Funds' custodian, administrator, and transfer agent) to process your transactions and otherwise provide services to you.

Confidentiality and Security. The Funds restrict access to your non-public personal information to those persons who require such information to provide products or services to you. The Funds maintain physical, electronic, and procedural safeguards that comply with federal standards to guard your nonpublic personal information.
